

Discover the advantages

- Experience a cooler surface temperature compared to traditional finishes concrete, asphalt and rubber
- Trust in independently verified, anti-slip ratings for both wet and dry applications
- Protect against premature fading and secure excellent resistance to UV radiation and chlorine with the combination of colorfast technology and our unique, two-part aliphatic polyurethane binder
- Relax, knowing PolySoft is hygienic and easy to maintain
- Ideal for pool decks, indoor water parks, children's water play areas, hotel and resort kids' clubs and pathways

Aquatrak

Convenient and cool

Aquatrak showcases Polysoft's versatility and adaptability. Similar to Play and Splash, it is a trowelled surface, but because it's non-porous, it has a bare-feet-friendly finish that's perfect for pool decks and indoor water parks.

Aquatrak's impervious texture makes it easier to clean than porous surfaces and keeps maintenance to a minimum. It is also slip-resistant, which ensures a safer surface in all types of weather.

Aquatrak has a low profile of 4mm – 6mm and can be used to retrofit unsightly concrete or painted surfaces. It is a straight-forward installation requiring minimal site preparation – making it a more cost-effective choice than similar, more high-maintenance products on the market.

Convenient and easy to install Aquatrak is a smart, value-for-money surface choice.
